

**May 2022**

## **President's Message**

The Mac Club is very happy to be operating normally now with classes and help. Here are some items of interest.

We are all aware that technical equipment need frequent updating and replacement. Class donations and membership fees allows us to upgrade our equipment and purchase operating supplies. Here are some recent upgrades to enhance your experience while in the lab.

We are very pleased with the recent purchase of a **new 75 inch television** to replace our nine year old classroom TV. This upgrade is providing an outstanding picture quality and will match the resolution of the other, newer TV.

The lab recently upgraded our wireless connectivity by installing a **new Wi-Fi router** using the latest protocol, Wi-Fi 6. This provides faster service to many more people and will improve the students experience while in class.

We are also in the process of **upgrading our sound speaker system** with a LightSpeed RedCat system. This system is commonly used in school classrooms. We are looking forward to installing this system late May.

Our teaching calendar has been modified due to volunteer instructors needing to move on to other projects. We thank these instructors, Caryn Glasky and Chi-Chin Wang, for their outstanding service to the Club and Village. We finally got the new macOS class started (delayed due to COVID shutdown) and appreciate Dennis Kelly for taking on this new class. Look for future new classes to be announced in our news letter email.

If you are not a member of the club, stop by and fill out a membership form or download the form from our website, [TheMacClub.org](http://TheMacClub.org).

Gene Hollaway  
President
